

Bryan P. Saavedra

Zamboanga City, Philippines | bryansaavedrab272@gmail.com | github.com/BrianC0des

PROFESSIONAL SUMMARY

Passionate Computer Science student and Aspiring Full-Stack Developer focused on building clean web applications, interactive developer tools, and reliable backend APIs. Strong foundation in JavaScript, Node.js, HTML/CSS, and C++, with an emphasis on simple, scalable software and continuous learning.

EDUCATION

Western Mindanao State University (WMSU)
Bachelor of Science in Computer Science (College of Computer Studies)

2022 – Present
Zamboanga City, Philippines

TECHNICAL SKILLS

Languages & Frontend: HTML5, CSS3, JavaScript (ES6+), C++ (Fundamentals), Python (Familiar)

Backend & APIs: Node.js, Express.js, RESTful APIs, API Proxying, JSON, CORS

AI & Agentic Tooling: Google Antigravity, Claude Code, Autonomous Agent Workflows, Prompt Architecture

Tools & Environments: Git, GitHub, Linux, Bash / Shell, Terminal / CLI, Vercel

PROJECTS & OPEN SOURCE

StudyPY — Interactive CS Sandbox & Learning Platform
Full-Stack Web Application (github.com/BrianC0des/Studypy)

JavaScript, Node.js, Express, HTML5/CSS3, REST APIs
Lead Developer

- Developed a centralized learning platform and sandbox hub for Computer Science students featuring real-time multi-language code execution (Python, Java, C/C++, JavaScript, PHP).
- Designed interactive visualizers: dynamic SVG Git Branching Simulator, SQL Join & Venn Diagram Visualizer, and DSA animators for educational reinforcement.
- Built a decoupled Node.js and Express backend server to proxy compiler API execution requests, enforce rate limiting, and structure data delivery.
- Engineered a lightweight, responsive interface using vanilla JavaScript, modern CSS, and modular components for desktop and mobile devices.

TermChat — Cross-Platform Terminal Messaging & File Vault
Terminal Communication Suite (github.com/BrianC0des/termchat)

CLI / Terminal, P2P Architecture, Ed25519 Cryptography
Creator & Developer

- Designed a decentralized terminal UI communication and file-sharing tool featuring end-to-end encrypted room messaging and zero-trust room tokens.
- Integrated an interactive Shared Files Vault (`/files`, `/get`) facilitating direct peer-to-peer file sharing without centralized intermediaries.
- Implemented ephemeral self-destructing chat rooms (`/destroy`) with automated countdown timers for privacy-focused communication.
- Packaged multi-platform builds supporting Linux, macOS, Windows, and Android Termux environments.
